About GreenTeam

The project started on 1 November 2021 and will run until 31 October 2023.

The GreenTeam project aims at building knowledge, skills and attitudes in the field of climate change and sustainable development. GreenTeam envisages popularization of modern, innovative e-learning methodology and tools to raise participants' competences related to ecology and providing educators and teachers with appropriate tools for working with youth. It will contribute to innovation in vocational education and training (VET) and increase the attractiveness of VET. GreenTeam will help participants in their professional and personal development and increase the possibilities of engagement in future areas and sectors of the European and non-European labor market, related to climate and sustainable development.

The consortium selected **ten key sectors** connected to the area of ecology: Carbon footprint, Climate knowledge, Renewable energy, Biodiversity, Water management, Food and agriculture systems, Transport and pollution, Sustainable consumption and ecological behavior, Environmental protection, Recycling and biodegradation.

Knowledge about them will be the main topic of the manufactured products of the project.

The **activities** undertaken in the project involve the creation of an innovative MOOC course, development of workshop programs - teaching materials, testing & implementation of workshops and the platform, development of didactic guides for educators as well as creation of an innovative e-learning platform and also organization of the disseminating, educational, training, and didactic events.

Project team:

The coordinator of the project is **Stowarzyszenie EURO-LIDER** from Poland

GREENTEAM

NEWSLETTER

The **kick-off meeting** of the GreenTeam project took place in form of a videoconference on 14 December 2021. The purpose of the meeting was to present project partners and activities in the project. We discussed the action plan, task and activities for achieving the intellectual outputs, administrative and financial rules of the project, quality plan and dissemination plan.

Status:

Since the beginning of the project, the partners have been working on intellectual output 1, which is the creation of an innovative MOOC course. The course module template, framework of course modules, and the course materials for all 10 key sectors have already been prepared.

Next steps:

In order to finish the project activities for intellectual output 1, the partners need to translate all of the course materials into their native languages, and after this they will be transferred to the Moodle platform. The project consortium already started to work on intellectual output 2 - development of workshop programmes - teaching materials and intellectual output 5 - creation of an innovative e-learning platform.

The consortium met face to face for the first time on the 2nd Transnational meeting in Maribor, Slovenia. Meeting started on 19th of May 2022. The partners assessed activities in the project in order to adapt the action plan if needed.

On the first day of our second Transnational project meeting in Maribor, Slovenia (19. 5. 2022), the project partners visited the International Center for Self-Sufficiency Dole (near Poljčane) as an example of integrated self-sufficiency and an example of good practice of integrating green competencies into the way of life.
