UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Znanstvenoraziskovalne metode
Course title:	Research methods

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Psihologija, 3. stopnja		1.	1.
Psychology, 3rd degree		1.	1.

Vrsta predmeta / Course type

Univerzitetna koda predmeta / University course code:

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija (Laboratorijske vaje)	Samost. delo Individ. work	ECTS
10					80	3

Nosilec predmeta / Lecturer:

Jeziki / Languages:	Predavanja / Lectures:	slovenski / slovene
	Vaje / Tutorial:	slovenski / slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoji za vključitev v delo: Pogojev ni.

Pogoji za opravljanje študijskih obveznosti:
Vsaka izmed naštetih obveznosti mora biti opravljena s pozitivno oceno. Pozitivna ocena iz problemsko zastavljenih pisnih nalog je pogoj za pristop k ustnemu izpitu.

Prerequisites:

Prerequisites for attending the course: None.

Prerequisites for completing the course: Each of the mentioned commitments must be assessed with a passing grade. Passing grade of the problem-based learning exercises is required for taking the oral examination.

Vsebina:

Content (Syllabus outline):

<ol style="list-style-type: none">1. Raziskovalni načrti v psihologiji in potek psihološkega raziskovanja: Generiranje idej in raziskovalnega problema, formulacija hipotez, izbira metode zbiranje podatkov, etični vidiki raziskovanja)2. Merjenje v psihologiji: Značilnosti kakovostnega merjenja, določanje zanesljivosti in veljavnosti3. Analiza eksperimentalnih in kvaziekperimentalnih podatkov: Različne oblike analize razlik med skupinami4. Analiza korelacijski podatkov: Multipla regresija, strukturno modeliranje, analiza moderacije in mediacije5. Dodatne vsebine glede na tematiko naloge: Analiza vzdolžnih/longitudinalnih podatkov, analiza diad, konstrukcija novega psihološkega instrumenta in preverjanje merskih značilnosti	<ol style="list-style-type: none">1. Psychological research designs and the research process: Generation of ideas and research problems, hypotheses development, the choice of a research approach, ethical considerations in research2. Psychological measurement: Characteristics of quality measurement, reliability and validity testing3. Analysis of experimental/quasi-experimental data: Different approaches for examining group differences4. Analysis for correlational data: Multiple regression, structural equation modeling, moderation and mediation analyses5. Special topics based on own research problem: Analysis of longitudinal data, dyadic data analysis, questionnaire construction and testing of psychometric properties

Cohen, B. H. (2014). *Explaining Psychological Statistics* (4th ed.). New York: Wiley

Leong, F. T. L. & Austin, J. T. (2006). *The psychology research handbook: A guide for graduate students and research assistants* (2nd ed.). Thousand Oaks, CA: Sage Publications.

Hayes, A. F. (2013). *Introduction to Mediation, Moderation, and Conditional Process Analysis: A Regression-Based Approach*. New York: The Guilford Press.

Kline, R. B. (2015). *Principles and Practice of Structural Equation Modeling* (4th ed.). New York: The Guilford Press.

Cilji in kompetence:

Objectives and competences:

Cilj predmeta je študente seznaniti z osnovnimi metodami psihološkega raziskovanja in z vsemi fazami raziskovalnega procesa. Po izvedbi predmeta bodo študenti razumeli razlike med raziskovalnimi načrti, znali samostojno zastaviti raziskovalni načrt in ustrezno formulirati hipoteze. Študenti bodo tekom predmeta nadgradili obstoječe znanje o statističnih in psihometričnih analizah in bodo znali uporabiti ustrezne statistične analize za svoje raziskovalne načrte. Predmet študentom omogoča samostojno delo pri izvedbi raziskav od faze koncipiranja raziskava do obdelave podatkov, ob tem pa študenti razumejo posebnosti psihološkega raziskovanja in med raziskovalnim procesom dosledno upoštevajo etična načela.

The aim of the course is to introduce the students to the basic methods of psychological research and all stages of the research process. After successfully completing the course, students will understand the differences between the various research plans and will be able to independently develop a research plan and formulate appropriate hypotheses. During the course, students will upgrade their existing knowledge of the statistical and psychometric analyses and will be able to apply appropriate statistical analyses for their research plans. The course will enable students to work independently in carrying out their research projects from study conception to data analysis. During this process, students will gain understanding of the specific features of psychological research and will be able to adhere to ethical principles.

Predvideni študijski rezultati:

Študenti razumejo posamezne faze raziskovalne procesa in statistične postopke. Svoje podatke znajo obdelati z ustreznimi statističnimi programi (SPSS, AMOS, Mplus). Študenti pridobljeno znanje znajo uporabiti pri samostojni izvedbi raziskovalnega projekta. Dodatno so študenti zmožni kritično ovrednotiti lastnih raziskovalni načrt ter njegove prednosti in pomanjkljivosti.

Intended learning outcomes:

Student understand the different phases of the research process and various statistical procedures. They are able to analyze their data with appropriate statistical software (SPSS, AMOS, Mplus). Students are also able to implement the obtained knowledge when independently conducting a research project. Moreover, students are able to critically evaluate their own research agendas as well as their strengths and weaknesses.

Metode poučevanja in učenja:

Interaktivna predavanja
E-učenje
Problemsko zastavljene naloge

Learning and teaching methods:

Interactive frontal method
E-learning
Problem-based learning exercises

Načini ocenjevanja:

Ustno izpraševanje
Pisne naloge

Pogoji za opravljanje študijskih obveznosti: Pogojev ni.

Prerequisites:

Prerequisites for attending the course: None.
Prerequisites for completing the course: None.

Vsebina:

Izdelava osnutka dispozicije doktorske disertacije: Študent v sodelovanju z mentorjem opredeli temo svoje doktorske disertacije in izbiro raziskovalnega problema. Dodatno razvije raziskovalni načrt in prouči relevantno temeljno literaturo.

Content (Syllabus outline):

Preparation of a draft of the PhD proposal: In collaboration with the supervisor, the student defines the topic of his/her PhD dissertation and the research problem. Additionally, he/she develops a research plan and inspects relevant literature.

Temeljni literatura in viri / Readings:

American Psychological Association. (Ed.) (2010). *Publication manual of the American Psychological Association (6th ed.)*. Washington, DC: American Psychological Association.

Belcher, L. W. (2009). *Writing your journal article in 12 weeks: A guide to academic publishing success*. Thousand Oaks, CA: Sage.

Evans, J. St. B. T. (2015). *How to be a researcher: A strategic guide to academic success*. Hove, UK: Psychology Press.

Leong, F. T. L. & Austin, J. T. (2006). *The psychology research handbook: A guide for graduate students and research assistants (2nd ed.)*. Thousand Oaks, CA: Sage Publications.

Sternberg, R. J. (2003). *The psychologist's companion: A guide to scientific writing for students and researchers (4th ed.)*. New York: Cambridge University Press.

Druga literatura s področja disertacije po dogovoru z mentorjem./Other literature from the field in agreement with the supervisor.

Cilji in kompetence:

Študent pripravi osnutek dispozicijo, v kateri opredeli temo in namen svoje disertacije, določi raziskovalne metode in navede predvidene vire.

Objectives and competences:

Student prepares a draft of the PhD proposal in which he/ she defines theme and purpose of his/ her dissertation, determines research methods and planned sources.

Predvideni študijski rezultati:

Skladno s priporočili LERU (2014; str. 6-7)¹ bo študent:

- razumel, preveril in razvijal kompleksne teorije ali hipoteze in uporabljal sofisticirane koncepte, metode in orodja svojega področja na zelo visoki ravni
- sposoben prepoznati relevantne probleme in jih prevesti v vprašanja, ki jih je mogoče proučiti s pomočjo znanstvenega raziskovanja
- uporabljal kritično presojo pri prebiranju pretekla literature

Skladno s priporočili LERU (2014; str. 6-7) se bo študent dodatno naučil:

- razmišljati analitično in sintetično
- biti ustvarjalen, radoveden in izvirnen
- prevzeti intelektualna tveganja
- javno nastopati in predstavljati
- jasno pisno izražati

Intended learning outcomes:

In accordance with the LERU guidelines (2014; p. 6-7)² the student will:

- understand, test and advance complex theories or hypotheses and to deploy sophisticated concepts, methodologies and tools in the chosen subject to a very high level
- be able to identify issues and translate them into questions amenable to scholarly enquiry
- use critical judgement when evaluating previous research

Transferable/Key Skills and other attributes:

In accordance with LERU guidelines (2014; p. 6-7) the student will additionally learn how to:

- think analytically and synthetically
- be creative, inquisitive, and original
- take intellectual risks
- speak and present effectively in public
- write clearly

Druga literatura s področja disertacije po dogovoru z mentorjem./Other literature from the field in agreement with the supervisor.

Cilji in kompetence:

Študent določi raziskovalne metode, s katerimi bo proučil zastavljene hipoteze.

Objectives and competences:

The student defines and determines what research methods will be used in testing the proposed hypotheses.

Predvideni študijski rezultati:

Skladno s priporočili LERU (2014; str. 6-7) bo študent³:

- razumel, preveril in razvijal kompleksne teorije ali hipoteze in uporabljal sofisticirane koncepte, metode in orodja svojega področja na zelo visoki ravni
- sposoben prepoznati relevantne probleme in jih prevesti v vprašanja, ki jih je mogoče proučiti s pomočjo znanstvenega raziskovanja
- uspešno zasledoval izvedbo izvirnih znanstvenih raziskav na izbranem področju
- uspešno upravljal z negotovostjo, ki izvira iz izbire metod in ciljev raziskave

Skladno s priporočili LERU (2014; str. 6-7) se bo študent dodatno naučil:

- razmišljajti analitično in sintetično
- biti ustvarjalen, radoveden in izviren
- prevzeti intelektualna tveganja
- javno nastopati in predstavljati

Intended learning outcomes:

In accordance with the LERU guidelines (2014; p. 6-7) the student will⁴:

- understand, test and advance complex theories or hypotheses and to deploy sophisticated concepts, methodologies and tools in the chosen subject to a very high level
- be able to identify issues and translate them into questions amenable to scholarly enquiry
- successfully pursue original research in the chosen field
- manage a high degree of uncertainty both in method and in outcomes

Transferable/Key Skills and other attributes:

In accordance with LERU guidelines (2014; p. 6-7) the student will additionally learn how to:

- think analytically and synthetically
- be creative, inquisitive, and original
- take intellectual risks
- speak and present effectively in public

Druga literatura s področja disertacije po dogovoru z mentorjem./Other literature from the field in agreement with the supervisor.

Cilji in kompetence:

Študent ima zbrane prve obsežnejše podatke.

Objectives and competences:

The student has finished his or her broader data collection.

Predvideni študijski rezultati:

Skladno s priporočili LERU (2014; str. 6-7) bo študent:⁹

- razumel, preveril in razvijal kompleksne teorije ali hipoteze in uporabljal sofisticirane koncepte, metode in orodja svojega področja na zelo visoki ravni
- sposoben prepoznati relevantne probleme in jih prevesti v vprašanja, ki jih je mogoče proučiti s pomočjo znanstvenega raziskovanja
- uspešno zasledoval izvedbo izvirnih znanstvenih raziskav na izbranem področju
- uspešno upravljal z negotovostjo, ki izvira iz izbire metod in ciljev raziskave
- delal skladno z etičnimi principi v znanstvenem raziskovanju
- reflektiral pomanjklivosti lastnega raziskovanja
- sposoben prenesti lastna spoznanja na skupnost raziskovalcev

Intended learning outcomes:

In accordance with the LERU guidelines (2014; p. 6-7) the student will¹⁰:

- understand, test and advance complex theories or hypotheses and to deploy sophisticated concepts, methodologies and tools in the chosen subject to a very high level
- be able to identify issues and translate them into questions amenable to scholarly enquiry
- successfully pursue original research in the chosen field
- manage a high degree of uncertainty both in method and in outcomes
- work according to ethic principles
- reflect upon the limitations of own research
- transfer new knowledge to scholarly communities

In accordance with LERU guidelines (2014; p. 6-7) the student will additionally learn how to:

- think analytically and synthetically

¹⁰ Source: <https://www.leru.org/files/Good-Practice-Elements-in-Doctoral-Training-Full-paper.pdf>

Skladno s priporočili LERU (2014; str. 6-7) se bo študent dodatno naučil:

- razmišljajti analitično in sintetično
- biti ustvarjalen, radoveden in izvirnen
- prevzeti intelektualna tveganja
- javno nastopati in predstavljati
- jasno pisno izražati

- be creative, inquisitive, and original
- take intellectual risks
- speak and present effectively in public
- write clearly

Metode poučevanja in učenja:

Individualne konzultacije, skupinsko delo z drugimi študenti višjih in nižjih letnikov (po metodi kolegialnega coachinga), revijalni klub (tj. srečanja ob prebiranju znanstveno raziskovalnih člankov) in samostojno delo študenta.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoji za vključitev v delo: Pogojev ni.

Pogoji za opravljanje študijskih obveznosti: Pogojev ni.

Prerequisites:

Prerequisites for attending the course: None.

Prerequisites for completing the course: None.

Vsebina:

Študent v okviru tega predmeta opravi obveznosti z udeležbo na različnih aktivnostih (delavnicah, tečajih, seminarjih, poletnih šolah, izobraževanjih ipd.), ki jih izvaja Univerza v Mariboru ali druge priznane domače ali tuje institucije. Aktivnosti lahko zajemajo naslednja širša tematska sklopa:

Content (Syllabus outline):

Student fulfils the obligations at the subject by active participation at different activities (e.g. workshops, courses, seminars, summer schools, training etc.) conducted by University of Maribor or other renown domestic or foreign institution. Activities can be chosen from two main topics:

- **splošne veščine in znanja** (aktivna udeležba delavnic, seminarjev, izobraževanj, tečajev s področja komunikacije in retorike, IKT, administracije, etike, prijave in pisanja projektov, zakonodaje ipd.)

- **veščine s področja prenosa znanja iz/v neakademsko okolje** (aktivna udeležba delavnic, seminarjev, izobraževanj, tečajev iz podjetništva, o zaščiti intelektualne lastnine, inovacijah, virih financiranja, sodobnih tehnologijah, prenosu znanj v prakso, poslovnem načrtovanju, raziskavah tržišč ipd.)

Posamezna aktivnost se ovrednoti z najmanj 0,5 ECTS. Aktivnosti, ki so daljše in zahtevajo več samostojnega dela študenta, se lahko ovrednotijo z večjim številom ECTS, vendar ne več kot z 1 ECTS.

Študent mora izbrati najmanj eno aktivnost iz posameznega tematskega sklopa.

Študent mora pred udeležbo posamezne aktivnosti oddati s strani delovnega mentorja potrjeno vlogo nosilcu predmeta. Vloga mora vsebovati informacije o aktivnosti in program dela. Nosilec nato odloči o primernosti izbire in ob odobritvi aktivnost ovrednoti z ECTS.

- **general skills and knowledge** (active participation at workshops, courses, seminars or training in the field of communication and rhetoric, ICT, ethics, project applications and administration, regulations and legislations etc.)

- **skills of knowledge transfer into/from non-academic environment** (active participation at workshops, courses, seminars or training on the protection of intellectual property, business, innovation, funding sources, modern technologies, transfer of knowledge into practice, business planning, market research etc.)

Each activity is assessed with at least 0,5 ECTS. Activity that demands more individual work from students can be assessed with larger value of ECTS but not more than with 1 ECTS.

Student has to choose at least one activity from each of the two main topics.

Before attending the activity student has to submit the application confirmed by the working mentor to the lecturer of this subject at the Department of Philosophy. The application should include information about the activity and the program of work. The lecturer will then decide on the appropriateness of the selection and upon approval it will assess the activity with ECTS.

Temeljni literatura in viri / Readings:

Ni predpisana/Not defined.

Cilji in kompetence:

Cilj predmeta je študente usposobiti aktivno uporabljati prenosljiva znanja in jih opremiti s kompetencami za sledenje razvojnih trendov stroke ter razširiti njihova metodološka znanja za reševanje in implementacijo zahtevnih

Objectives and competences:

The aim of this course is to train students for actively use transferable skills and to equip them with the competencies for tracking the development trends of the profession and to expand their methodological knowledge for

tehničnih, tehnoloških, organizacijskih in razvojnih nalog ter projektov. Tukaj gre večinoma za znanja, veščine in kompetence, ki jih ni moč usvojiti pri klasičnem izobraževanju znotraj uveljavljenega kurikuluma strokovnega področja, za katerega se kandidat izobražuje, saj so vezane na aktualne razmere in trende, ki se hitro spreminjajo.

solving and implementation of complex technical, technological, organizational and developmental tasks and projects. These are mostly knowledge, skills and competences within the established area of expertise that cannot be gained during the standard curriculum, since they are tied to the current situation and trends, which are rapidly changing.

Predvideni študijski rezultati:

Študent osvoji izbrana (odvisno od izbire aktivnosti) prenosljiva znanja in veščine na področjih:

- Pisanje znanstvenih prispevkov
- Raziskovalna etika
- Intelektualna lastnina
- Tuji znanstveni jezik
- Jezikovna urejenost besedil
- Komuniciranje
- Drugo (npr. uporaba novih statističnih programov, poznavanje novih metod za obdelavo podatkov)

Intended learning outcomes:

Student gains selected (depending on the choice of activity) transferable knowledge and skills in the areas of:

- scientific writing
- ethics in research
- intellectual property
- foreign language
- proofreading
- communication
- other (e.g., use of statistical programs and tools, statistical training)

Metode poučevanja in učenja:

Samostojno delo študenta in druge oblike študija, ki lahko zajemajo tudi aktivno udeležbo na konferencah, seminarjih, delavnicah, poletnih šolah, tečajih ipd.

Learning and teaching methods:

Individual student work, and other forms of work, which may include active participation at conferences, seminars, workshops, summer schools, courses, etc.

Cilji in kompetence:

Študent izdelava doktorsko disertacijo in jo odda v oceno.

Objectives and competences:

The student prepares the doctoral thesis and submits it.

Predvideni študijski rezultati:

Skladno s priporočili LERU (2014; str. 6-7) bo študent¹⁵:

- razumel, preveril in razvijal kompleksne teorije ali hipoteze in uporabljal sofisticirane koncepte, metode in orodja svojega področja na zelo visoki ravni
- sposoben prepoznati relevantne probleme in jih prevesti v vprašanja, ki jih je mogoče proučiti s pomočjo znanstvenega raziskovanja
- uspešno zasledoval izvedbo izvornih znanstvenih raziskav na izbranem področju
- uspešno upravljal z negotovostjo, ki izvira iz izbire metod in ciljev raziskave

Intended learning outcomes:

In accordance with the LERU guidelines (2014; p. 6-7) the student will¹⁶:

- understand, test and advance complex theories or hypotheses and to deploy sophisticated concepts, methodologies and tools in the chosen subject to a very high level
- be able to identify issues and translate them into questions amenable to scholarly enquiry
- successfully pursue original research in the chosen field
- manage a high degree of uncertainty both in method and in outcomes
- work according to ethic principles

Metode poučevanja in učenja:

Individualne konzultacije, skupinsko delo z drugimi študenti višjih in nižjih letnikov (po metodi kolegialnega coachinga), revijalni klub (tj. srečanja ob prebiranju znanstveno raziskovalnih člankov) in samostojno delo študenta.

Learning and teaching methods:

Individual consultations, group work with younger and senior students, journal club (tj. regular meetings where students read relevant scientific articles) and independent student's work.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoji za vključitev v delo: Pogojev ni.

Pogoji za opravljanje študijskih obveznosti:
Vsaka izmed definiranih obveznosti mora biti zaključena s pozitivno oceno. Ocena enaka ali višja minimalni (6/10) na testu iz predavanj in seminarjev, ki vsebuje problemske naloge, je predpogoj za pristop k ustnemu izpitu.

Prerequisites:

Prerequisites for attending the course: None.

Prerequisites for completing the course:
Each of the defined commitments must be completed with a passing grade. A grade equal to or higher than the passing minimum (6/10) of the problem-based test based on lectures and seminars is required for taking the oral examination.

Vsebina:

Content (Syllabus outline):

1. Uvod v nevrofiziologijo
2. Struktura in funkcija nevronov in nevroglije
3. Sinaptični prenos
4. Senzorični sistem
5. Motorični sistem
6. Višje živčne funkcije in plasticnost živcevja
7. Osnove nevropatofiziologije

1. Introduction to neurophysiology
2. Structure and function of neurons and neuroglia
3. Synaptic transmission
4. Sensory system
5. Motor system
6. Higher functions of the nervous system and neural plasticity
7. Basics of neuropathophysiology

Temeljni literatura in viri / Readings:

Kandel ER, Schwartz JH, Jessel TM, Siegelbaum SA, Hudspeth AJ. Principles of Neural Science. Fifth Edition. McGraw-Hill, New York: 2013.

Boron WF, Boulpaep EL. Medical Physiology. 2e Updated Edition. Saunders, Philadelphia: 2012.

Rang HP, Ritter JM, Flower RJ, Henderson G. Rang & Dale's Pharmacology, 8e 8th Edition. Elsevier Churchill Livingstone, Edinburgh: 2015.

Purves D. Neuroscience. 5th edition. Sinauers 2012.

Cilji in kompetence:

Poglavitni cilj predmeta je pridobitev znanj o strukturi in funkciji nevronov in nevroglije, o celični organizaciji in vzdražnosti, zakonitostih sinaptičnega prenosa in organizaciji nevronov v jedra, traktuse in funkcionalne enote, ki so podlaga senzoričnega in motoričnega sistema, so podlaga za plastičnost živčevja ter omogočajo višje živčne funkcije (mišljenje in vedenje). Na osnovi znanja o normalni strukturi in funkciji bo študent dobil vpogled tudi v nevropatofiziologijo najpogostejših bolezni, kot so anksioznost, shizofrenija, depresija in demenca.

Objectives and competences:

The major aim of the course is to gain knowledge on structure and function of neurons and neuroglia, on cellular organization and excitability, principles of synaptic transmission and organization of neurons into nuclei, tractus and functional units that form the basis of the sensory and motor system, its plasticity, and enable higher functions of the nervous system (cognition and behavior). On the basis of the knowledge about normal structure and function, the student will gain insight into neuropathophysiology of most common diseases, such as anxiety, schizophrenia, depression and dementia.

Predvideni študijski rezultati:

Znanje o in razumevanje strukture citoplazme in membrane nevronov in nevroglije, o vzdražnosti nevronov in nevroglije, o anatomiji jeder in traktusov ter višjih centrov. Znanje in razumevanje načina komunikacije med celicami

Intended learning outcomes:

Knowledge about and understanding of structure of cytoplasm and membrane of neurons and neuroglia, of neuronal and glial excitability, of nuclei, tractus and higher centers. Knowledge and understanding of modes of

v centralnem živčnem sistemu, o njihovi plastičnosti, o živčnih prenašalcih in osnovah delovanja zdravil, ki delujejo v centralnem živčnem sistemu. Kompleksno razumevanje zaznavanja, motorike in višjih funkcij ter nastanka bolezni.

communication between cells in the central nervous system, its elasticity, about neurotransmitters and modes of action of drugs acting in the central nervous system. Complex understanding of the principles of sensation and motor actions, as well as the most common central nervous system disorders.

Pogoji za vključitev v delo: Pogojev ni.

Pogoji za opravljanje študijskih obveznosti:

Vsaka izmed definiranih obveznosti mora biti zaključena s pozitivno oceno. Ocena enaka ali višja minimalni (6/10) na testu iz predavanj, seminarjev in vaj, ki vsebuje problemske naloge, je predpogoj za pristop k ustnemu izpitu.

Prerequisites:

Prerequisites for attending the course: None.

Prerequisites for completing the course:

Each of the defined commitments must be completed with a passing grade. A grade equal to or higher than the passing minimum (6/10) of the problem-based test based on lectures, seminars, and practicals is required for taking the oral examination.

Vsebina:

Content (Syllabus outline):

1. Uvod v napredne metode v fiziologiji: od posameznih celic do organizma kot celote
2. Metoda vpete krpice membrane (patch-clamp) za določevanje aktivnosti ionskih kanalov
3. Konfokalno slikanje spremembe znotrajcelične koncentracije kalcijevih ionov za določevanje celične aktivnosti
4. Merjenje eksocitoze
5. Elektrofiziološke osnove delovanja srca, EKG in HRV
6. Elektrofiziološke osnove EEG
7. Elektrofiziološke osnove EMG
8. Integrativna fiziologija: dihanje, delovanje ledvic in srca
9. Napredne metode obdelave podatkov: procesiranje podatkov in napredne analitične metode (analiza časovnih vrst, teorija kompleksnih mrež)

1. Introduction to advanced methods in physiology: from individual cells to the organism as a whole
2. The patch-clamp method to measure activity of ion channels
3. Confocal imaging of intracellular calcium concentration changes
4. Measuring exocytosis to measure cellular activity
5. Electrophysiological basis of heart action, ECG, and HRV
6. Electrophysiological basis of EEG
7. Electrophysiological basis of EMG
8. Integrative physiology: respiration, kidney and heart function
9. Advanced methods of data analysis: processing and advanced analysis (time series analysis, complex network theory)

Temeljni literatura in viri / Readings:

Kandel ER, Schwartz JH, Jessel TM, Siegelbaum SA, Hudspeth AJ. Principles of Neural Science. Fifth Edition. McGraw-Hill, New York: 2013.

Molleham A. Patch Clamping An Introductory Guide to Patch Clamp Electrophysiology. Wiley & Sons 2003.

Pawley J. Handbook of Biological Confocal Microscopy. Third edition. Springer, 2006.

Cilji in kompetence:

Poglavitni cilj predmeta je pridobitev teoretičnih znanj in praktičnih veščin za izvedbo meritev fiziološke aktivnosti človeka na nivoju celice, organskih sistemov in organizma kot celote in posledično bolje razumeti stresni odziv.

Teoretične osnove in praktično obdelovanje v meritvah pridobljenih surovih podatkov.

Objectives and competences:

The major aim of the course is to gain theoretical knowledge and practical skills to conduct measurements of physiological activity of a human on a different organizational levels: at the level of a single cell, organ systems, and the organism as a whole and consequently get better insight into the physiology of stress.

Theoretical basis and practical processing of experimentally acquired raw data.

Predvideni študijski rezultati:

Znanje o in razumevanje fizioloških meritev kot mero aktivnosti ljudi na nivoju posameznih celic (metoda vpete krpice membrane in konfokalno slikanje), na nivoju organov (konfokalno slikanje, EKG, HRV, EEG, EMG) in na nivoju organizma kot celote (povezovanje pridobljenih podatkov o delovanju posameznih organov v celoto). Znanje in uporaba metod za obdelovanje fizioloških podatkov

Intended learning outcomes:

Knowledge about and understanding of physiological measurements enabling determination of human activity on the organizational level of single cells (patch clamp technique, confocal imaging), on the level of organs (confocal imaging, ECG, HRV, EEG, EMG), and on the level of body as a whole (integrating acquired data of human body organ activities). Knowledge and application of methods of physiological data processing.

Cilji in kompetence:

Cilj predmeta je posredovati celovit pregled fizioloških ozadij, tehnik in metod zajemanja, modelov in analiz v zvezi z biomedicinskimi signali in slikami centralnega in perifernega živčnega sistema. Znanstveno bodo utemeljene povezave s kognitivno nevroznanostjo in njenimi uporabnimi vidiki.

Objectives and competences:

This course gives students a thorough overview of physiological backgrounds, acquisition techniques and methods, models and analysis related to biomedical signals and functional neuroimaging. Their links with, and practical implications in, cognitive neuroscience will be scientifically substantiated.

Predvideni študijski rezultati:

Po zaključku tega predmeta bo študent sposoben

- razumeti povezave med fiziološkimi in fizikalnimi ozadji ter modernimi tehnikami za spremljanje biomedicinskih signalov in slik,
- analizirati potrebe po takšnih pristopih v zvezi s kognitivno nevroznanostjo, razvijati raziskovalne pristope v nevroznanosti, ki bodo vključevali obdelavo signalov in slik,
- raziskati, razumeti in ovrednotiti obstoječe pristope, sklepati o možnih rešitvah in uvajati nove ideje za računalniško podporo kognitivni nevroznanosti.

Intended learning outcomes:

On completion of this course the student will be able to

- understand relationships between physiological and physical backgrounds and modern support techniques for biomedical signals and neuroimaging,
- analyse necessities for such solutions in cognitive neuroscience,
- develop research approaches with inclusion of signal and image processing, comprehend, research, and evaluate known approaches, infer on possible solutions and introduce new ideas for computer support to cognitive neuroscience.

Članki iz revij kot so: Cognitive Development, Journal of Cognition and Development, Cognitive Psychology, ...

Cilji in kompetence:

Študentje in študentke:

- Poglobljeno spoznajo posamezna področja kognicije in njihov razvoj;
- nadgradijo znanje in razumevanje o značilnostih razvoja mišljenja v

Objectives and competences:

Students:

- get acquainted with and comprehend different fields of cognitive functioning and their development;

<p>posameznih obdobjih ter pomenu individualnih razlik;</p> <ul style="list-style-type: none">• obvladajo pomembne teorije in modele kognicije ter novejša izsledka na področju kognitivnega razvoja.	<ul style="list-style-type: none">• become able to deeply understand characteristics of cognitive development and importance of individual differences;• become able to understand theories and models of cognition and get familiar with new findings in the field of cognitive development.
---	--

Predvideni študijski rezultati:

Poznavanje in poglobljeno razumevanje različnih področij kognicije in njihovega razvoja ter teorij in modelov v kognitivni psihologiji.

Sposobnost kritične presoje in uporabe znanstvenih in strokovnih spoznanj o kogniciji/kognitivnem razvoju na področju drugih ved ter v praksi.

Intended learning outcomes:

Familiarity with and understanding of different areas of cognitive development, and theories and models in cognitive psychology.

Ability to critically judge and apply scientific and professional findings about cognitive characteristics and development in other fields and in the praxis

Metode poučevanja in učenja:

- interaktivna predavanja;
- razgovor;
- obravnava študijskih primerov;
- delo z besedilom
- multimedijske predstavitve

Learning and teaching methods:

- interactive lectures;
- discussion;
- case studies discussion;
- working with texts
- multimedia presentation

Aktualni sodobni članki v znanstveni periodiki/current articles in scientific journals

Cilji in kompetence:

Objectives and competences:

Cilj predmeta je študente seznaniti s ključnimi sodobnimi modeli učenja in motivacije ter različnimi pristopi k (merjenju) osebnostnih, motivacijskih in emocionalnih značilnosti. Študenti bodo po izvedbi predmeta poznali ključne teorije in modele učenja in motivacije ter razumeli prepletenost kognitivnih, osebnostnih, motivacijskih in emocionalnih dejavnikov pri napovedovanju učenja. Poznali bodo prednosti in pomanjkljivosti različnih pristopov k merjenju kognitivnih, osebnostnih, motivacijskih in emocionalnih pojavov ter povezanih psiholoških konstrukтов. Prepletenost učnih, osebnostnih, motivacijskih in emocionalnih dejavnikov bodo znali pojasniti z različnimi modeli (npr. procesni model odnosov med socialnim kontekstom, selfom, vedenjem in izidi v okviru teorije samodoločanja) in na različnih pojavih (npr. zanos, ustvarjalnost). Pridobljeno znanje bodo znali povezati z lastnimi raziskovalnimi problemi in prenesti v aplikativne kontekste ter na področje nevroznanosti.

The aim of the course is to introduce the students to the basic contemporary approaches to the (measurement of) academic, motivational, and emotional characteristics. After successfully completing the course, students will be familiar with the main theories and models of learning and motivation and will understand the interrelatedness of cognitive, personality, motivational, and emotional factors in predicting learning. They will be familiar with the advantages and limitations of different approaches for assessing cognitive, personality, motivational, and emotional aspects and related psychological constructs. They will be able to explain the interrelatedness between these aspects using different psychological models (e.g. the process model of the relations between social context, self, behavior and outcomes stemming from the self-determination theory) and on different constructs (e.g. flow, creativity). They will be able to relate the acquired knowledge with their own research problems and transfer it into the applied contexts and in neuroscience.

Predvideni študijski rezultati:

Študenti poznajo in razumejo različne modele osebnosti in motivacije in jih znajo uporabiti pri pojasnjevanju učenja. Poznajo različne pristope k merjenju učnih, osebnostnih, emocionalnih in emocionalnih značilnosti ter njihove prednosti ter omejitve. Naučene modele in pristope znajo uporabiti pri lastnem raziskovalnem delu ter prenesti v aplikativne kontekste ter na področje nevroznanosti.

Intended learning outcomes:

Students are familiar with and understand different models of personality and motivation and are able to use them in explaining learning. They are familiar with different approaches to the assessment of academic, personality, motivational, and emotional characteristics and their strengths and limitations. They are able to use the acquired models and approaches in their own research work and generalize it to the applied contexts and to neuroscience.

Robbins, S. P., Judge, T. A., & Campbell, T. T. (2010). Organizational behavior. Harlow, UK: Pearson Education.

Prispevki periodičnih publikacijah (npr. članki v revijah Journal of Organizational Behavior, Journal of Vocational Behavior, Journal of Occupational Health Psychology, Journal of Applied Psychology, Journal of Management itd.).

Cilji in kompetence:

Cilj predmeta je študente seznaniti z glavnimi temami, ki jih pokrivajo področja organizacijskega vedenja, psihologije dela ter kadrovske in organizacijske psihologije. Po izvedbi predmeta bodo študenti razumeli vedenje ljudi znotraj delovnih organizacij in znali samostojno razviti raziskovalna vprašanja, vezana na eksperimentalne načrte ali korelacijske študije. Predmet študente spodbuja k samostojni zasnovi raziskav počutja, zdravja in vedenja ljudi pri delu.

Objectives and competences:

The aim of the course is to introduce the students to the basic topics covered by the fields of organizational behavior, work psychology, personnel, and organizational psychology. After successfully completing the course, students will understand individual and group behavior at work and will be able to independently develop research questions related to experimental and correlational studies. The course will encourage students to independently design studies related to well-being, health and behavior at work.

Predvideni študijski rezultati:

Študenti razumejo osnove organizacijskega vedenje in znajo znanje uporabiti pri pripravi izvirnih raziskovalnih vprašanj na tem področju. Študenti bodo znanje in razumevanje nadgradili s sodobnimi pristopi v organizacijskem vedenju, psihologiji dela, kadrovske in organizacijske psihologiji.

Intended learning outcomes:

Student understand the basics of organizational behavior and are able to apply this knowledge when developing creative research questions from this field. During this process, students will broaden their knowledge and understanding with contemporary approaches in organizational behavior, work psychology, personnel, and organizational psychology.

- Turkle, S. (2011). *Alone Together*. New York: Basic Books.

Boyd, d. (2014). *It's Complicated: The Social Lives of Networked Teens*, 296.

Cilji in kompetence:

Cilj predmeta je študenta seznaniti s celovitim pregledom učinkov uporabe informacijskih tehnologij, kot so računalniki, omrežja, roboti in umetna inteligenca, na vedenje, psihološke značilnosti in duševne procese posameznika ter delovanje skupin. Predstavljeni bodo ključni psihološki koncepti relevantni za obravnavo posameznika, socialne interakcije podprte z informacijsko tehnologijo ter interakcije med človekom in stroji.

Predmet razvija kompetence na področju raziskovanja psiholoških fenomenov povezanih z uporabo računalniških tehnologij, aplikacije ustreznih raziskovalnih metod, analize uporabe informacijskih tehnologij ter kritičnega mišljenja o vplivih tehnologije na psihologijo in življenje človeka.

Objectives and competences:

The aim of this module is to introduce the students with an overview of information technology, networks, robots and artificial intelligence implications on human behaviour, psychological consequences and group functioning. The student will be introduced with key psychological concepts relevant for understanding of individuals, social interactions and human-machine interactions.

This module broadens competences in the field of exploration of psychological phenomena related to information technology, application of appropriate research methods, analysis of technology applications and critical thinking about influences of IT on psychology and human life.

Predvideni študijski rezultati:

Pozna in razume relevantne teorije ter ima pregled nad problemi na področju psihologije virtualnih prostorov, vedenja ter socialnih interakcij v virtualnih okoljih. Prepoznava razlike v vedenju znotraj in izven virtualnega okolja.

Skozi uporabo in primerjavo relevantnih teorij analizira vedenje posameznikov in skupin v povezavi z rabo informacijskih tehnologij ter pojasnjuje opažena vedenja in posledice rabe tehnologij.

S psihološkega stališča kritično vrednoti pomen sprememb v razvoju informacijskih tehnologij in vrednoti ter predvideva pojave vedenj v virtualnih okoljih.

Intended learning outcomes:

Knows and understands relevant theories and lists problems in the field of cyberpsychology. Recognises behavioural differences between online and offline environments.

Using relevant theoretical background student is able to analyse behaviour of individuals and groups, explains identified behaviour and consequences of use of information technology.

Critically evaluates influences of changes in IT development from psychology viewpoint. Evaluates and foresees behaviour in cyberspace.

Student obtains practical skills using different IT tools, applications and virtual environments.

Študent pridobi praktične veščine z uporabo različnih IKT orodij in aplikacij.

Študent je zmožen nuditi svetovanje v povezavi s tehnološkimi inovacijami in v povezavi z IKT v splošnem.

Student is able to provide counselling with regard to technological innovations and usage of IT in general.

Metode poučevanja in učenja:

- delo z besedilom
- razprava z obravnavo študijskih primerov in prebrane literature
- analiza konkretnih primerov in razlage primerov pojavov v virtualnem okolju
- pisanje esejev s kritičnim vrednotenjem besedil

Learning and teaching methods:

- Work with texts
- Discussions of literature and case studies
- Analysis and explanations of online phenomena
- Writing essays with critical evaluation of given texts

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoji za vključitev v delo: Osnovna znanja iz biologije, kemije, ter anatomije in fiziologije.

Pogoji za opravljanje študijskih obveznosti: Vsaka izmed naštetih obveznosti mora biti opravljena s pozitivno oceno. Pozitivna ocena iz seminarjev je pogoj za pristop k izpitu.

Prerequisites:

Prerequisites for attending the course: Knowledge of biology, chemistry, and anatomy and physiology.

Prerequisites for completing the course: Each of the mentioned commitments must be assessed with a passing grade. Passing grade for the seminars is required for attending the final exam.

Vsebina:

Content (Syllabus outline):

1. Osnove splošne farmakologije

- 10. Farmakodinamika in farmakokinetika
- 11. Molekularna farmakologija in kemijski mediatorji

2. Osnove o psihozah in psihiatričnih motnjah

- Anksioznost
- Depresija
- Bipolarna motnja
- Obsesivne motnje
- Druge

3. Zdravila s psihotropnimi učinki:

- 12. Anksiolitiki
- 13. Antidepresivi
- 14. Antipsihotiki
- 15. Antikonvulzivi
- 16. Psihostimulansi

1. Principles in general pharmacology:

- Pharmacodynamics and pharmacokinetics
- molecular pharmacology and chemical mediators

2. Principles of psychosis and mental disorders:

- Anxiety
- Depression
- Bipolar disorder
- Obsessive disorders
- Others

3. Psychotropic medication:

- Anxiolytics
- Antidepressants
- Antipsychotics
- Anticonvulsants
- Psychostimulants

Temeljni literatura in viri / Readings:

Lüllmann H, Hein L, Mohr K. Pocket Atlas of Pharmacology, 4th edition (ali novejša): Thieme, Stuttgart/New York; 2010.

Cilji in kompetence:

- spoznati osnove mehanizma delovanja zdravil, vpliv zdravil na organizem in vpliv organizma na zdravila
- pridobiti pregledno znanje o psihotropnih zdravilih in boleznih, ki jih zdravijo

Objectives and competences:

- to acquire knowledge on basic mechanisms of drug actions and the fate of drugs in the human body
- to get an overview of the most important psychotropic drugs and the diseases they are prescribed to treat

Predvideni študijski rezultati:

- spoznati osnovne mehanizme delovanja zdravil, vpliv zdravil na organizem in vpliv organizma na zdravila
- pridobiti pregledno znanje o psihotropnih zdravilih in boleznih, ki jih zdravijo
- povezovanje pričakovanih učinkov, koristnih in škodljivih

Intended learning outcomes:

- to acquire knowledge on basic mechanisms of drug actions and the fate of drugs in the human body
- to get an overview of the most important psychotropic drugs and the diseases they are prescribed to treat
- linking the expected drug effects, useful and harmful

- sposobnost kritično uporabljati relevantne literaturne vire na področju psihofarmakologije

- the ability of critical usage of relevant literature sources in the field of psychopharmacology

Cilji in kompetence:

Objectives and competences:

Cilj tega predmeta je razumeti teoretične osnove računalniške obdelave naravnega jezika in poglobljeno razumevanje njihovega delovanja.

The objective of this course is to demonstrate understanding of theoretical basis data intensive linguistics and to obtain deep knowledge how algorithms work.

Predvideni študijski rezultati:

Po zaključku tega predmeta bo študent sposoben:

- razumeti teoretične osnove obdelave naravnega jezika,
- primerjati posamezne pristope,
- razumeti delovanje evolucijskih algoritmov, razumeti razlike med iskalnimi algoritmi, ki temeljijo na populaciji rešitev ter ostalimi iskalnimi algoritmi,
- načrtovati nove izpeljanke obdelav naravnih jezikov

Intended learning outcomes:

On completion of this course the student will be able to:

- understand theoretical basis of data intensive linguistics,
- compare different approaches,
- understanding of evolutionary algorithms,
- understand differences between population-based algorithms and other search algorithms,
- designing new variants of computer based linguistics processing

Metode poučevanja in učenja:

- predavanja,
- seminarske naloge.

Learning and teaching methods:

- lectures,
- tutorial.

Cilji in kompetence:

<p>Cilj predmeta je spoznati računsko ozadje, ki jih izvajajo živčni sistemi. Študentje se naučijo vključevati podatke iz nevrobiologije, jih simulirati in formulirati teorije o možganih.</p>

Objectives and competences:

<p>The objective of this course is to study the computations carried out by the nervous system. Students incorporate data from neurobiology, simulate and formulate theories about the brain.</p>

**Predvideni študijski rezultati:**

Po zaključku tega predmeta bo študent sposoben:

- Razumeti temeljne koncepte iz nevroznanosti,
- Razumeti koncepte in metodologije pri kognitivnem modeliranju,
- Razumeti temeljne koncepte nevronske mreže,
- Uporabljati specialne sisteme na področju nevroznanosti.

Intended learning outcomes:

On completion of this course the student will be able to:

- Understand basic concepts from neuroscience,
- Understand basic concepts and methodology underlying cognitive modelling,
- Understand basic concepts of neural networks,
- Use special software tools in field of neuroscience.

Metode poučevanja in učenja:

- predavanja,
- raziskovalni projekt,
- laboratorijske vaje,
- reševanje domačih nalog

Nosilec predmeta / Lecturer:

Jeziki / Predavanja / Lectures:
Languages: Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoji za vključitev v delo: Pogojev ni.
Pogoji za opravljanje študijskih obveznosti: Vsaka izmed naštetih obveznosti mora biti opravljena s pozitivno oceno. Pozitivna ocena iz problemsko zastavljenih pisnih nalog, ter multimedijskih predstavitev je pogoj za pristop k ustnemu izpitu.

Prerequisites:

Prerequisites for attending the course: None.
Prerequisites for completing the course: Each of the mentioned commitments must be assessed with a passing grade. Passing grade of the problem-based learning exercises and multimedia presentations is required for taking the oral examination.

Vsebina:

Content (Syllabus outline):

Vsebina predmeta gradi na poglobljenem študiju emocij z upoštevanjem sodobnih perspektiv. Poudarek je na poglobljanju temeljnega znanja o emocijah, individualnih emocijah, njihovega razvoja ter procesov uravnavanja z aplikacijo pridobljenih znanj.

Teme:

1. Konceptualizacija emocij:
 - interdisciplinarne podlage
 - biološke in nevrofiziološke perspektive
 - kognitivne perspektive
 - merjenje emocij
2. Razvojni in osebni vidiki emocij:
 - razvoj emocij;
 - razvoj emocij znotraj socialnih kontekstov
 - socialno in emocionalno učenje
 - uravnavanje emocij
 - osebnost, subjektivno blagostanje
3. Socialni vidiki emocij
 - emocije med skupinami
 - empatija in prosocialno vedenje
 - socialne funkcije emocij
 - emocije in spol
4. Kognitivni vidiki emocij
 - kognitivna ocena
 - emocionalna inteligentnost
 - vpliv emocij na odločanje
 - vpliv emocij na učenje
 - emocije in spomin
5. Posamezne emocije
 - strah in anksioznost
 - jeza in sovražnost
 - zadrega, sram, ponos, krivda
 - gnus
 - žalost in žalovanje
 - pozitivne emocije
 - ...
6. Emocije v aplikativni psihologiji

V skladu z lastnih raziskovalnim načrtom bodo študentke in študenti dodali poglobitve v aplikativni smeri: emocije v vzgoji in izobraževanju, emocije v psihologiji dela,

The subject builds on indepth research of emotions based on conteporary perspectives. The focus is on depening the basic knowledge about emotions, individual emotions, their development and regulation processes with aplication of acquired knowledge.

Topics:

1. Conceptualisation of emotions:
 - Interdisciplinary foundations
 - Biological and neurophysiological approaches
 - Cognitive perspectives
 - Mersurement of emotions
2. Developmental and personality issues
 - Development of emotions;
 - Development of emotions in social contexts
 - Social and emotional learning
 - Emotional regulation
 - Personality, subjective well-being
3. Social perspectives
 - Intergroup emotions
 - Empathy and prosocial behaviour
 - Social functions of emotions
 - Gender and emotion in context
4. Cognitive factors
 - Kognitivne appraisal
 - Emotional intelligence
 - Influence of emotion on decision making
 - Influence of emotion on learning
 - Memory and emotion
5. Individual emotions
 - Fear and anxieties
 - Anger and hostility
 - Embaresement, shame, guilt, pride
 - Sadness and grief
 - Positive emotions
 - ...

6. Emotion in aplicative psychology
In line with individual research areas of doctoral studenst the aplicative research will be added:

emocije v klinični psihologiji, emocije v socialni psihologiji, emocije in zdravje...

emotion in education, emotions in clinical psychology, emotions in social psychology, emotions in work and organizational psychology, emotions and health...

Temeljni literatura in viri / Readings:

Lewis, M., Haviland-Jones, J. M., Feldman Barrett, L. (2008). *Handbook of emotions*. New York: The Guilford press

Gross, J. J. (2007). *Handbook of Emotion regulation*. New York: The Guilford Press.

Durlak, J. A., Domitrovich, C. E., Weissberg, R. P. & Gullotta, T. P. (2015). *Handbook of Social and Emotional Learning: Research and Practice*. New York: The Guilford Press.

Milivojevič, Z. (2008). *Emocije: razumevanje čustev v psihoterapiji*. Novi sad: Psihopolis.

Lopez, S. J. & Snyder, C. R. (2009). *The Oxford Handbook of Positive Psychology*. Oxford: Oxford University Press.

Corr, P.J. (2009). *The Cambridge Handbook of Personality Psychology*. Cambridge: Cambridge University Press.

Cilji in kompetence:

- Poglobljeno spoznajo emocije z upoštevanjem različnih perspektiv in kontekstov;
- Razumejo razvoj emocij skozi razvojna obdobja ter procese povezane z uravnavanjem emocij;
- Poznajo najnovejša spoznanja podprčja ter jih prenašajo na aplikativni nivo.

Objectives and competences:

- get acquainted with and comprehend the emotions form contemporary perspectives and different contexts;
- understands emotional development through developmental stages and the processes related to emotion regulation;
- become acquainted with the newest findings from the field and are able to impose application to them.

Predvideni študijski rezultati:

Poznavanje in poglobljeno razumevanje sodobnih perspektiv emocij, razvoja ter vloge emocij v različnih kontekstih.

Intended learning outcomes:

Familiarity with and understanding of contemporary perspectives on emotions, emotional development and the role emotions play in different contexts.

Sposobnost kritične presoje in uporabe znanstvenih in strokovnih spoznanj o emocijah, emocionalnem razvoju in uravnavanju emocij. Naučene modele in pristope znajo uporabiti pri lastnem raziskovalnem delu ter prenesti v aplikativne kontekste.

Ability to critically judge and apply scientific and professional findings about emotions, emotional development and emotion regulation. They are able to use the acquired models and approaches in their own research work and generalize it to the applied contexts.

Metode poučevanja in učenja:

- interaktivna predavanja;
- razprave;
- obravnava študijskih primerov;
- delo z besedilom, problemske pisne naloge
- multimedijske predstavitve

Learning and teaching methods:

- interactive lectures;
- discussions;
- case studies discussion;
- working with texts, problem-based learning exercises
- multimedia presentation

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogojev ni.

Prerequisites:

None.

Vsebina:

Temeljna nevrofiziologija centralnega živčevja s poudarkom na strukturah pomembnih za spanje.

Temelji polisomnografije kot osnovne metode za proučevanje telesnih funkcij med spanjem.

Temelji cirkadianih ritmov.

Uravnavanje spanja.

Cikli spanja.

Spremembe v spanju s staranjem.

Najpogostejše motnje spanja.

Content (Syllabus outline):

Basic neurophysiology of central nervous system with special knowledge of anatomical structures involved in sleep.

Basics of polysomnography as a main method used to explore biophysiological changes during sleep.

Basics of circadian rhythms.

Sleep regulation.

Sleep cycles.

Age-related changes in sleep.

Most prevalent sleep disorders.

Telesne in psihološke posledice deprivacije spanja.

Psihološki modeli nekaterih motenj spanja.

Temeljni klinično-psihološki in nevropsihološki preizkusi za ocenjevanje motenj spanja in spremljanje učinkov zdravljenja motenj spanja.

Kognitivne, vedenjske in druge nefarmakološke intervence pri motnjah spanja.

Physiological and psychological consequences of sleep deprivation.

Psychological model of specific sleep disorders.

Psychological and neuropsychological tests to aid in the assessment and treatment of sleep disorders.

Cognitive, behavioral and other non-medication interventions for sleep disorders.

Temeljni literatura in viri / Readings:

Cilji in kompetence:

Objectives and competences:

Cilj predmeta je študente seznaniti s temeljnimi znanji iz področja somnologije ter jih vpeljati v osnove raziskovanja spanja. Poseben poudarek bo na vedenjski medicini spanja.

Slušatelj bo pridobil temeljna znanja iz nevrofiziologije in nevroanatomije spanja ter spoznal osnovne metodološke pristope v ocenjevanju fiziologije in funkcije spanja ter drugih fizioloških funkcij med spanjem.

Slušatelj bo pridobil temeljna znanja cirkadianih ritmov budnosti in spanja ter bo seznanjen z razvojem spanja pri živalskih vrstah in človeku.

Slušatelj bo spoznal najpogostejše motnje spanja v sodobnem svetu.

Slušatelj bo svoje znanje in razumevanje nadgradil s sodobnimi modeli in pristopi v vedenjski medicini spanja. Spoznal bo psihološke modele nekaterih motenj spanja, s posebnim poudarkom na nespečnosti kot najpogostejši motnji spanja.

Spoznal bo temeljne klinično-psihološke in nevropsihološke preizkuse za ocenjevanje motenj spanja in spremljanje učinkov zdravljenja motenj spanja. Slušatelj bo spoznal temeljne sodobne nefarmakološke intervence pri motnjah spanja.

The aim of the course is the acquisition of basic knowledge in the field of somnology and introduce the candidate to basics in sleep research. Special emphasis will be in behavioural sleep medicine. The candidate will gain basic knowledge in neurophysiology and neuroanatomy of sleep and will gain basic knowledge for research on physiology and function of sleep and other physiological functions during sleep.

The candidate will gain basic knowledge in neural control of sleep and wake, other circadian rhythms, and will gain basic knowledge of sleep development in animals and humans.

The candidate will gain basic knowledge in most prevalent sleep disorders.

Students will broaden their knowledge and understanding with contemporary approaches in behavioural sleep medicine. Candidate will gain knowledge in psychological models of specific sleep disorders, with special emphasis on insomnia as most prevalent sleep disorder.

Candidate will be introduced with key psychological tests to aid in the assessment and treatment of sleep disorders and will get an overview of the most important non-medication interventions for sleep disorders.

Predvideni študijski rezultati:

- Poglobiti znanje o nevrobiologiji normalnega in motnega spanja
- Spoznati osnovne raziskovalne pristope v somnologiji in vedenjski medicini spanja
- Pridobiti osnovno znanje o psiholoških modelih motenj spanja, psiholoških pristopih za ocenjevanje motenj spanja

Intended learning outcomes:

- Extension of knowledge in neurobiology of normal sleep and sleep disorders
- Get acquainted with basic research approaches in somnology and behavioural sleep medicine
- The acquisition of basic knowledge in psychological models of sleep disorders and psychological approaches in

<p>ter poglavitnih nefarmakoloških pristopih pri zdravljenju motenj spanja</p> <ul style="list-style-type: none">- Pridobiti sposobnost kritičnega uporabljanja literature na področju somnologije in vedenjske medicine spanja	<p>evaluation and treatment of sleep disorders</p> <ul style="list-style-type: none">- Develop the ability of critical usage of relevant literature sources in the field of somnology and behavioural sleep medicine
---	--

Metode poučevanja in učenja:

Kandidati bodo študirali teme, o katerih bodo opravljena interaktivna predavanja, oziroma bodo obravnavane v obliki konzultacij. Pripravili bodo več seminarskih nalog

Learning and teaching methods:

The course will include interactive lectures or individual consultations; candidates will prepare seminars.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Domače naloge s predavanj	50%	Homeworks from lectures
Seminarska naloga	50%	Seminar paper

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoji za vključitev v delo: Pogojev ni.

Pogoji za opravljanje študijskih obveznosti: Vsaka izmed obveznosti mora biti opravljena, končni izdelek je seminarska naloga, ki mora biti ocenjena s pozitivno oceno.

Prerequisites:

Prerequisites for attending the course: None.

Prerequisites for completing the course: Each of the commitments must be assessed with a passing grade, the final grade is a seminar paper, which must be assessed with a positive grade.

Vsebina:

Content (Syllabus outline):

<ol style="list-style-type: none">6. Teorije psihične priprave – kaj je, kdo jo lahko izvaja in pod katerimi pogoji jo vključevati;7. Značilnosti sodelovanja športnika in trenerja s psihologom.8. Strokovni športni team in pristopi k sodelovanju v teamu.9. Motivacijske teorije v športu10. Širši vidiki psihične priprave – sodelovanje s starši, sodelovanje z novinarji in športno javnostjo, sodelovanje z upravami klubov.11. Spremljanje in opazovanje športnikovega psihičnega delovanja.12. Pretreniranost in kako jo opazovati.13. Uporaba in zloraba substanc, doping in njegov vpliv na šport, dopinška testiranja.14. Pristopi k obravnavanju poškodb v psihologiji športa15. Psihopatološki vidiki s poudarkom na motnjah prehranjevanja v športu.16. Razvojne teorije in njihov vpliv pri odraščajočih športnikih in športnicah.17. Diagnotični postopki v športu	<ol style="list-style-type: none">1. Theories of psychological preparation – what it is, who can perform it and under what conditions;2. Characteristics of athlete – psychologist cooperation and coach –psychologist cooperation.3. A professional sports team and approaches to cooperation within the team.4. Motivational theories in sport.5. A broader view of psychological preparation – cooperation with parents, with journalists and other media, with the spectators and fans, how to communicate with leaders of clubs and organizations.6. Evaluation and assessment of the athlete’s psychological functioning.7. Exhaustion, overtraining and how to observe it.8. Substance use and abuse in sport, doping testing and the effect of doping in sport.9. Psychological approaches to athletic injuries10. Psychopathology in sport ith emphasis on eating disorders.11. Developmental theories and their impact in the growing athlete.12. Diagnostical approaches in sport.

Cilji in kompetence:

Objectives and competences:

<ul style="list-style-type: none">• Cilj je pri doktorantu zbuditi razumevanje in poznavanje psihične priprave v športu, jo naučiti o njeni vlogi v športu in spodbuditi široko razumevanje njenega vključevanja v šport.• Cilj je doktoranta usposobiti za praktično reagiranje in delovanje v nekaterih specifičnih in občutljivih temah, to so teme v povezavi z dopingom, motnjami hranjenja, reakcijami na poškodbo, reagiranjem na nasprotnika, odraščanjem športnikov.• Cilj je doktoranta ozavestiti o pomenu vzpostavljanja strokovnih športnih teamov ter ga naučiti pomena sodelovanja psihologa z drugimi, ki lahko njegovo delo obogatijo in razširijo.	<ul style="list-style-type: none">• The goal is to enhance the student's understanding of the importance of psychological preparation in sport and to teach the student about the role of psychology in sport and encourage a broad understanding of including sport psychology into sport.• The goal is to teach the student adequate reactions and functioning in certain delicate, specific areas of sport – doping, eating disorders, injuries, reactions to the opponent, the athlete's growing up.• The goal is to make the student understand the importance of establishing a professional sport team and to teach him about the importance of psychologists's cooperation with people, who can enrich and expand his work.
--	---

Predvideni študijski rezultati:

Poznavanje delovanja psihičnih procesov v tekmovalnem športu.
Sposobnost izvajati osnovno psihično pripravo športnika.
Dobro komuniciranje in sodelovanje s športnikom in z ostalimi sodelavci.
Razumevanje postopnosti in kompleksnosti psihičnih sprememb.
Razumevanje vloge psihologije kot znanosti v športu, dobre komunikacijske spretnosti.

Intended learning outcomes:

:
Understanding of the role of psychological functioning in competitive sport.
Ability to perform basics of psychological preparation in sport.
Good communication skills and cooperation with the athlete and other co – workers.
Understanding the complexity and graduate progress of psychological changes.
Understanding of the role of psychology as a science in sport, using good communication skills.
